

Company with Waste Material
Lancet Laboratories

Company that needs Waste Material
AJ Polycycling

Summary of intervention

Lancet Laboratories is a leading pathology laboratory in South Africa. The company provides specialist pathology services for the corporate, insurance and mining sectors.

The 20 tonnes of polystyrene and polypylene of waste that was generated per year and ended up in landfill is now cleaned and sold to a picture framing company by AJ Polycycling.

AJ Polycycling was birthed out of the desire to create a sustainable environment in 2014. The company recycled a number of plastic products (HDPE – extrusion, blow moulding and injection moulding grade bottles, shavings, containers,

Savings

Intervention implemented:
Recycling

GHG Emissions Reduction
307 tonnes

Industrial Water
Saved **5 610 m³**

Monetary savings ZAR
(Want company):
R13 400

Waste diverted from
landfill:
20 tonnes
